

FinRelief AI – AI Powered Debt Relief & Financial Recovery Platform

7. Project Documentation

Overview

This document summarizes the technical documentation prepared for the FinRelief AI project to support development, deployment, maintenance, and future enhancements.

README Documentation

Prepared a comprehensive README including project overview, technology stack, installation steps, project structure, API information, usage instructions, and future enhancements.

Source Code Organization

The project is organized into separate frontend and backend folders with reusable components, modular FastAPI routers, database models, and utility modules for easier maintenance.

API Documentation

REST API endpoints are documented for authentication, loan management, financial health, settlement prediction, negotiation email generation, borrower rights, history management, and AI services.

Database Documentation

SQLite schema includes Users, Financial Profiles, Loans, and History tables with clearly defined relationships and data validation.

GitHub Repository

The complete project source code is maintained in GitHub using Git version control with commit history, repository structure, and collaboration support.

Installation Guide

Instructions are provided for cloning the repository, installing frontend and backend dependencies, configuring environment variables, and running the application locally.

Maintenance & Future Enhancements

The modular architecture enables future integration of MySQL, cloud deployment, advanced AI recommendations, PDF reports, and email notification services.
