

Technology Stack

Date	7 July 2026
Team ID	XXXXXX
Project Name	AI Powered Debt Relief & Financial Recovery Platform
Maximum Marks	2 Marks

Define Your Technology Stack:

Identify the programming languages, frameworks, databases, front-end tools, back-end tools, and APIs that you will use to build your solution. A well-chosen technology stack ensures that your application is scalable, maintainable, and aligned with your project requirements.

Fill out the table below to detail the specific technologies chosen for each component of your

S.No	Architecture Component / Layer	Technology Chosen	Justification / Purpose
1	Frontend / Client-Side (e.g., React, Angular, HTML/CSS)	<i>React.js, Vite, HTML5, CSS3, JavaScript, React Router DOM, Axios</i>	<i>Used to build a responsive, fast, and interactive user interface. React provides reusable components, Vite enables fast development, and Axios handles API communication.</i>

architecture and provide a brief justification for your choice.

Technology Stack Details

2	Backend / Server-Side <i>(e.g., Node.js, Python/Django, Java)</i>	<i>Python, FastAPI, Uvicorn</i>	<i>FastAPI provides high-performance REST APIs, automatic API documentation, and efficient backend processing. Uvicorn is used as the ASGI server.</i>
3	Database / Data Storage <i>(e.g., MySQL, MongoDB, PostgreSQL)</i>	<i>SQLite (Current), MySQL (Future)</i>	<i>SQLite is lightweight and easy to manage during development. MySQL is planned for future deployment to support larger datasets and scalability.</i>
4	Cloud / Hosting / Deployment <i>(e.g., AWS, Azure, Heroku, Docker)</i>	<i>Render (Backend), Vercel (Frontend), GitHub</i>	<i>[Explain why this was chosen (e.g., easy scalability, cost-effective Render hosts the FastAPI backend, Vercel deploys the React frontend, and GitHub manages source code and version control.)]</i>

5	Version Control & CI/CD	<i>Git, GitHub</i>	<i>Git tracks source code changes, while GitHub enables collaboration, repository management, and future CI/CD integration.</i>
	<i>(e.g., GitHub, GitLab, Jenkins)</i>		
6	Third-Party APIs / Other Tools	<i>Google Gemini API, JWT Authentication, SQLAlchemy, Werkzeug Password Hashing</i>	<i>Google Gemini API provides AI-powered financial assistance, JWT secures user authentication, SQLAlchemy manages database operations, and Werkzeug securely hashes passwords.</i>
	<i>(e.g., Stripe, Twilio, Google Maps)</i>
