

FinRelief AI – AI Powered Debt Relief & Financial Recovery Platform

8. Project Demonstration

Introduction

The project demonstration phase showcases the complete functionality of the FinRelief AI platform. It highlights the implementation of frontend, backend, database, AI modules, and GitHub version control through a working web application.

Application Workflow

1. User Registration
2. User Login
3. Dashboard Overview
4. Financial Profile Management
5. Loan Management
6. Financial Health Analysis
7. Settlement Prediction
8. AI Negotiation Email Generation
9. Borrower Rights Module
10. History Module

Features Demonstrated

- Secure JWT Authentication
- Interactive Dashboard
- Loan CRUD Operations
- Financial Health Metrics
- AI-powered Settlement Prediction
- AI Negotiation Email Generator
- Borrower Rights Information
- History Tracking

Technology Demonstration

Frontend: React.js + Vite

Backend: FastAPI + Python

Database: SQLite

AI: Google Gemini API with rule-based fallback

Version Control: Git & GitHub

Deployment Demonstration

The application is prepared for deployment with the frontend hosted on a static hosting platform and the FastAPI backend deployed as a web service. The GitHub repository maintains version control and supports future enhancements.

Project Outcome

The FinRelief AI platform successfully demonstrates a modern full-stack web application capable of assisting borrowers with financial management, debt settlement guidance, and AI-assisted recovery workflows.
