

Project Initialization and Planning Phase

Date	7 July 2026
Team ID	XXXXXX
Project Title	AI Powered Debt Relief & Financial Recovery Platform
Maximum Marks	5 Marks

Project Proposal (Proposed Solution) report

The proposed solution aims to simplify debt management and financial recovery by integrating artificial intelligence with a modern web application. The platform enables borrowers to manage loans, analyze financial health, predict settlement opportunities, generate negotiation emails, and understand borrower rights through an easy-to-use interface. The system improves financial decision-making, reduces repayment stress, and provides AI-assisted recommendations for better financial recovery.

Project Overview	
Objective	The primary objective is to develop an AI-powered financial recovery platform that helps borrowers manage debts efficiently through secure authentication, financial analysis, loan management, settlement prediction, and AI-assisted recommendations.
Scope	The proposed solution aims to simplify debt management and financial recovery by integrating artificial intelligence with a modern web application. The platform enables borrowers to manage loans, analyze financial health, predict settlement opportunities, generate negotiation emails, and understand borrower rights through an easy-to-use interface. The system improves financial decision-making, reduces repayment stress, and provides AI-assisted recommendations for better financial recovery.
Problem Statement	

Description	Solving these challenges will improve financial awareness, simplify debt management, support better settlement decisions, reduce financial stress, and help borrowers make informed financial decisions.
Impact	Solving these issues will result in improved operational efficiency, reduced risks, and an overall enhancement in the lending process, contributing to customer satisfaction and organizational success.
Proposed Solution	
Approach	Develop a full-stack web application using React.js , FastAPI , SQLite , and the Google Gemini API to provide secure authentication, financial analysis, AI-assisted recommendations, and loan management through a centralized platform.
Key Features	Key Features • Secure User Registration and Login • JWT-based Authentication • Financial Dashboard • Financial Health Analysis • Loan Management (Add, Edit, Delete, View) • AI-powered Settlement Prediction • AI Negotiation Email Generator • Borrower Rights Information • History Management • Responsive User Interface • Rule-Based AI Fallback when AI services are unavailable

	- Real-time decision-making for quicker loan approvals. - Continuous learning to adapt to evolving financial landscapes.

Resource Requirements

Resource Type	Description	Specification/Allocation
Hardware		
Computing Resources	CPU/GPU specifications, number of cores	Intel Core i5 Processor (or equivalent)
Memory	RAM specifications	8 GB RAM
Storage	Disk space for data, models, and logs	256 GB SSD (Minimum)
Software		
Frameworks	Python frameworks	React.js, Vite, FastAPI
Libraries	Additional libraries	Axios, SQLAlchemy, JWT, Werkzeug, Google Gemini SDK
Development Environment	IDE	Visual Studio Code, Python, Node.js, Git
Data		
Data	Source, size, format	SQLite (Current), MySQL (Future Enhancement)
