

Scalability & Future Plan

Date	7 July 2026
Team ID	XXXXXX
Project Name	AI Powered Debt Relief & Financial Recovery Platform
Maximum Marks	1 Mark

Scalability & Future Plan:

This document outlines how the current project solution can be scaled to handle larger user bases, increased data loads, or extended features in the future. It also captures the team's roadmap for enhancing and evolving the project beyond its current state.

Current System Limitations:

S.No	Limitation	Impact	Priority to Address (High / Medium / Low)
1	SQLite database is suitable only for development and small-scale deployments.	Performance may decrease as user data grows.	High
2	AI recommendations depend on external AI service availability.	Delays or limited functionality if the AI service is unavailable.	Medium
3	Limited reporting and notification features.	Users cannot receive automated alerts or downloadable reports	Medium

Scalability Plan:

S.No	Scalability Aspect	Current State	Proposed Upgrade / Solution
1	User Load	Supports a limited number of concurrent users.	Deploy load balancing, containerization (Docker), and auto-scaling cloud infrastructure.
2	Data Storage	Uses SQLite database.	Migrate to MySQL or PostgreSQL with backup and replication support.
3	Performance	Optimized for local and small-scale deployment.	Introduce Redis caching, API optimization, asynchronous processing, and database indexing.

4	Security	JWT authentication and password hashing are implemented.	Add Multi-Factor Authentication (MFA), HTTPS enforcement, API rate limiting, encryption at rest, and audit logging.
---	----------	--	---

Future Roadmap:

Phase	Planned Feature / Enhancement	Target Timeline	Expected Impact
Phase 2	Develop a mobile application using React Native or Flutter.	3–4 Months	Enable users to access financial services from mobile devices.
Phase 3	Introduce advanced AI features such as personalized financial planning, chatbot assistance, and predictive analytics.	5–6 Months	Enhance user experience and provide intelligent financial guidance.
Phase 4	Integrate banking APIs, automated notifications (Email/SMS), downloadable PDF reports, and multilingual support.	6–12 Months	Improve accessibility, automation, and support for a wider user base.
